

Engel would like to congratulate Darren Green and Wayne Smith from FTG Racing. Proudly sponsored by Engel, Darren and Wayne competed in the 2010 Australasian Safari and finished the event with impressive results, 1st in Class and 2nd Outright.

For Darren & Wayne's this was their 2nd attempt at the Safari. Last year they placed 1st in Class and 6th Outright. This year they were out to improve their results from last year. Entering the event in Darren's 1999 Nissan Patrol GU Wagon in Modified Production Class they were able to challenge the factory backed teams including that of Craig Lowndes from the PWR / Holden Rally Team.

Teamwork and Reliability played a key role in Darren and Wayne's results. The vehicle was a "Legend in Reliability", the same as the Engel Fridge than accompanied them on their adventure.

The Australasian Safari is considered the Dakar of the Asia Pacific Region. The Safari is known as one of the toughest and most challenging motoring events in the world and is internationally-renowned as the ultimate off-road adventure with competitors traversing over thousands of kilometres of gruelling outback terrain. This was the 25th year of the Australasian Safari. This year's event attracted over 110 Competitors from all over Australia and from Brazil, Sweden, China, South Africa, Japan and New Zealand.

The Safari covered over 3,700km over 8 days including 2,400km of competition stages. The Ceremonial Start was held at Hillarys Boat Harbour on 17th September, before moving to Southern Cross for the official start of the race on the 18th. From Southern Cross the competitors raced across the Western Australian Outback crossing the finish line on the Southern Coast in Esperance on the 25th September. The terrain varied from scrubby, rocky bush around Southern Cross and Leonora to closed-in-tree-lined stages around Coolgardie and Norseman and finished on the salt lakes and sand dunes in Esperance. Of the 112 vehicles starting the event on the Prologue Day only 64 vehicles finished the event, a 40% attrition rate.
